Education

Western University

- Bachelor of Engineering Science, BESc
- Electrical Engineering and Artificial Systems Engineering Dual Degree

Work Experience

Work Study - University of Western Ontario

November 2025 - Present

- Creating a physical version of the Graduate SmartStart Brightspace page for Western Engineering.
- Streamlining a program to create a set template for graduate course syllabus.
- Researched and compared various universities graduate programs to Western's in search of lacking areas.

Summer Student III - University of Western Ontario

June 2025 - August 2025

- Created, migrated and managed the Graduate SmartStart Brightspace page for Western's Engineering program.
- Produced a year end report for the Dean's Office for Western Engineering, outlining achievement and attendance throughout the year.
- Demonstrated adaptability throughout the work period on smaller projects where necessary.

IT Support Summer Student - York Region District School Board

May 2024 - September 2024

- Gained experience with parsing sensitive and secure data, working to identify personal information leaked within a data breach.
- Created a Python script, allowing for personal information detection to be detected and obtained automatically, increasing productivity by 50%.

Freelance Website Designer

December 2023 - Present

- Collaborated with a team member to create modern websites for a CREA certified real estate agent, resulting in a 30% increase in site traffic and a 20% boost in user engagement.
- Gained further proficiency in HTML and CSS website design.

IT Support Summer Student - York Region District School Board

May 2023 - September 2023

- Utilized technical skills in HTML, and Microsoft SharePoint to enhance user interface and functionality of the intranet platform.
- Demonstrated proficiency in SharePoint Online functionalities, contributing to the successful implementation of the new board calendar.

Project Experience

Speech Recognition API

April 2025

- Created a computer vision model using OpenCV, Pytesseract, and the Google Speech API, allowing a user to use Google Chrome using entirely their voice, and commands.
- Currently in a beta testing phase, with more features being added over time for different test cases.

Deep Learning Prediction Model

November 2024

- In a group of 4 students, created an LSTM learning model to predict future time series data on US economic data.
- Learned and utilized data preprocessing techniques and classification techniques to create a model with 83% accuracy.

Transfer Learning Classification Model

April 2024

- Using a Tensorflow Keras platform, tested and trained a transfer learning model to classify the SUN397 large dataset.
- Achieved a 58% accuracy score on 10 testing epochs with a batch size of 32 images.

Skills and Abilities

Technical Ability: Building, repairing computers (10 years), Computer diagnostics (MEMTEST, GPU-Z, etc.), data recovery (Photorec, DMDE), Proficient in spreadsheeting on Excel, Python (6 years experience, SKLearn, PyTorch, NumPy), Java (6 years experience), MATLAB (3 years experience), and C programming (2 years experience), HTML (2 years experience), CSS (2 years experience), Azure, Google Cloud Platform, React.js, Figma, IoT Systems, Machine Learning Implementation and Design (3 years experience, both MLL and CLL), Dataframe Creation, CAD design, SharePoint Online, SQL, PCB board usage, soldering, circuit simulation.

Languages: English (fluent) and French (fluent).
